LinkedIn: <https://linkedin.com/in/david-akanang-0789771a4/>

## Professional Summary

---

AI-focused full-stack engineer with 5+ years of experience building production web platforms, backend systems, workflow automations, AI-assisted tools, dashboards, and operational software for businesses, public-sector users, logistics teams, and service organizations. Strong background in Python, Django, FastAPI, Next.js, APIs, data workflows, integrations, reporting systems, and process optimization. Experienced in translating manual business processes into scalable digital workflows, connecting systems, reducing operational friction, and building tools that improve visibility, speed, and decision-making.

Well suited for AI automation and business transformation roles requiring hands-on technical execution, stakeholder collaboration, workflow analysis, API/webhook integrations, dashboard automation, prompt-driven AI workflows, and practical adoption of tools such as Claude Projects, MCP-style connected systems, Zapier, Make.com, n8n, Microsoft 365, CRM platforms, and other business automation ecosystems.

## Core Skills

---

- AI workflow automation: prompt design, AI-assisted pipelines, chatbot workflows, lead capture, document/report generation concepts, knowledge-system design
- Automation platforms and integration readiness: Zapier, Make.com, n8n, webhooks, REST APIs, scheduled jobs, event-driven workflows
- Claude and AI enablement: Claude Projects, Artifacts, prompt templates, team knowledge workflows, MCP concepts, AI adoption support
- Backend engineering: Python, Django, FastAPI, Flask, PHP, Laravel, REST APIs, GraphQL, WebSocket
- Frontend and dashboards: Next.js, React, TypeScript, Tailwind CSS, interactive dashboards, reporting interfaces
- Data and reporting: PostgreSQL, MySQL, MongoDB, Redis, Supabase, PostGIS, data collection workflows, dashboard-backed reporting
- Business systems: CRM-style workflows, operational platforms, payment systems, dispatch systems, admin portals, internal tooling
- Cloud and deployment: GCP, AWS, Render, Vercel, serverless functions, CI/CD, Docker
- Collaboration: stakeholder discovery, requirements gathering, workflow documentation, technical consulting, cross-functional delivery

## Automation & Integration Experience

---

- Built API-driven automation workflows using Python, FastAPI, Django, Supabase, PostgreSQL, scheduled scripts, and webhook-ready backend services.
- Integrated third-party services including Paystack, Google Maps, OpenAI, Google Gemini, WhatsApp API, Supabase, and custom REST APIs.
- Built and deployed workflows involving internal databases, custom APIs, payment flows, dispatch systems, lead capture, customer inquiry automation, and reporting dashboards.
- Familiar with automation platform patterns used by Zapier, Make.com, n8n, and Power Automate, including triggers, actions, webhooks, API authentication, and multi-step workflow design.

# Selected Project Experience

---

## Remote Job Automator

### AI Automation Pipeline | Python, Google Gemini, Web Scraping, Automation

GitHub: <https://github.com/DavidBugger/remote-jobs-automator>

- Built a 7-phase automation pipeline that scans remote job listings, extracts recruiter/contact information, and generates personalized AI-assisted outreach.
- Designed a repeatable workflow for reducing manual search, filtering, research, and messaging tasks.
- Applied AI generation, structured data extraction, automation logic, and pipeline sequencing to turn a repetitive business process into a reusable system.
- Relevant to this role: AI workflow design, process automation, data collection, content generation, and operational productivity.

## ChatBot Pro

### AI Chatbot SaaS | Next.js, OpenAI, Tailwind CSS, WhatsApp API

Live: <https://chatbot-pro-phi.vercel.app/>

- Built an AI-powered chatbot platform for lead capture, customer inquiries, and appointment booking.
- Designed business-facing automation for real estate, hotel, and logistics use cases, reducing missed inquiries and improving response time.
- Integrated AI responses with customer interaction flows and business lead generation needs.
- Relevant to this role: AI enablement, departmental productivity, customer workflow automation, prompt-driven interaction design.

## VendRush Delivery Platform

## **Logistics Automation Platform | Next.js, TypeScript, Supabase, PostGIS, Edge Functions**

Live: <https://vendrush.com>

- Served as lead architect for a serverless hyperlocal delivery platform.
- Built rider dispatch workflows, real-time tracking, secure payment flows, and operational logic for delivery coordination.
- Connected multiple system components to improve visibility, reduce duplicate work, and support scalable operations.
- Relevant to this role: workflow automation, connected business systems, operational dashboards, process optimization.

## **Oya Ridders Mobility Platform**

### **Mobility and Dispatch Platform | Next.js, Supabase, Paystack, Google Maps**

Live: <https://oyaridders.com/>

- Led development of a ride/mobility solution with real-time tracking, automated dispatching, and cashless payment workflows.
- Built user-facing and operational features supporting bookings, payments, routing, and service coordination.
- Relevant to this role: business system automation, stakeholder-facing workflows, system integration, process improvement.

## **Intelligent Flood Warning System**

### **AI Risk Dashboard | Python, XGBoost, LSTM, FastAPI, Next.js**

GitHub: <https://github.com/DavidBugger/intelligent-flood-prediction>

- Built an environmental AI pipeline for coastal flood prediction using machine learning models.
- Developed dashboard capabilities for risk visibility, data interpretation, and operational decision support.
- Relevant to this role: analytics automation, dashboard creation, AI-assisted reporting, leadership visibility.

## **Gonarlafiya Livestock AI**

### **AI Disease Prediction API | Python, FastAPI, ML Model, GCP**

Live: <https://gonar-lafiya-api.onrender.com/docs>

- Built an AI-driven disease prediction API for farmers, including multilingual disease guidance in English and Hausa.
- Delivered a practical AI decision-support tool for non-technical users.
- Relevant to this role: AI implementation, knowledge workflows, user enablement, applied AI support.

## **Ministry of Education, Bauchi State - BECE Result Portal**

### **Backend Engineering and Performance Optimization | PHP, MySQL, Redis**

Live: [https://moebauchi.bu.gov.ng/bece\\_result/](https://moebauchi.bu.gov.ng/bece_result/)

- Architected backend improvements for a high-traffic government results portal serving 50,000+ students.
- Introduced Redis caching, optimized database queries, indexed large datasets, and improved response performance during peak result-checking periods.
- Relevant to this role: reporting visibility, scalable systems, operational reliability, performance improvement.

## **Zambis Petroleum Operations Portal**

### **Operations Platform | Django, Next.js, PostgreSQL, Paystack**

Live: <https://zambispetroleum.com>

- Built an integrated operations platform for oilfield logistics, equipment monitoring, rentals, inventory, and field operations.
- Helped digitize and streamline operational workflows across multiple locations.
- Relevant to this role: internal systems, process digitization, connected workflows, operational reporting.

## Professional Strengths

---

- Quickly understands messy operational workflows and converts them into clear, repeatable systems.
- Comfortable working directly with business owners, department leads, and non-technical stakeholders.
- Strong bridge between business process improvement and hands-on implementation.
- Able to build from scratch when needed, but pragmatic about using automation platforms, APIs, and AI tools when they reduce time-to-value.
- Strong ownership mindset with experience delivering production systems for clients and organizations.

## Target Role Alignment

---

- AI-powered workflows: demonstrated through chatbot, job automation, AI prediction, and decision-support systems.
- Reporting and dashboards: demonstrated through flood risk dashboard, result portal optimization, logistics/operations platforms.
- Business systems integration: demonstrated through payment systems, maps, dispatch, database-backed workflows, APIs, and serverless functions.
- Process automation: demonstrated through logistics dispatch, job search automation, lead capture, customer inquiry automation, and internal portals.
- Claude/MCP readiness: strong API, AI-tooling, prompt workflow, and system integration background that can transfer directly into Claude Projects, Artifacts, MCP-connected workflows, and department-specific AI enablement.

## Availability

---

Fully remote. Based in Africa and able to align with U.S. business hours as required.
