Portfolio

PROFESSIONAL SUMMARY

Full-Stack Developer with 5+ years of experience building secure, scalable web applications in regulated and compliance-driven environments. Proven expertise in digital identity verification (NIN, Driver License), AML/KYC integrations, RESTful API development, and cloud-deployed platforms for government and private sector clients. Hands-on experience with blockchain-based smart contracts (Cardano/Aiken) and AI-driven fraud detection systems. Passionate about secure architecture, data protection compliance, and delivering high-performance solutions that power trust and accountability.

TECHNICAL CORE

Frontend

React / Next.js | TypeScript | JavaScript / ES6
Responsive UI / Dashboards

Backend & APIs

Node.js / Edge Functions
Python (Django / FastAPI) | RESTful APIs
GraphQL | OAuth / JWT / RBAC | Microservices

Databases & Infrastructure

PostgreSQL / PL/pgSQL | MongoDB | MySQL
Redis / Caching | Supabase / Firebase
Docker / CI/CD | AWS / GCP / Vercel

Security, Compliance & Blockchain

Identity Verification (NIN, DL)
AML/KYC Integrations
Secure Coding / Encryption
NDPR / GDPR Awareness
Blockchain (Cardano / Aiken) | AI Fraud Detection

PROFESSIONAL EXPERIENCE

Full-Stack Developer — VendRush

Nov 2025 — Present

- Architected a secure, serverless hyperlocal delivery platform using **Supabase**, **Next.js**, and **TypeScript Edge Functions**, supporting real-time order tracking for customers and vendors.
- Designed and implemented **RESTful APIs** with **JWT authentication** and **role-based access control (RBAC)** to secure all platform endpoints.

- Built complex rider dispatch algorithms using **PostGIS** for high-precision geospatial matching and optimized database queries for performance at scale.
- Implemented end-to-end payment flows with **Flutterwave** (HMAC-SHA256 webhook verification, idempotent processing) and automated SMS notification systems.
- Developed the **Admin Dashboard** (Next.js/React) for real-time monitoring of orders, vendor payouts, compliance records, and platform analytics.
- Deployed and managed application infrastructure on **cloud platforms** with Docker containerization and CI/CD pipelines.

Full-Stack Developer — OyaRiders

Jan 2024 — Oct 2025

- Engineered the ride-hailing platform backend using **Django** and **PostgreSQL**, managing high-volume concurrent real-time requests.
- Integrated **NIN (National Identity Number)** and **Driver License verification** APIs to ensure regulatory compliance and rider identity validation before onboarding.
- Implemented secure authentication and authorization systems (**OAuth, JWT**) with encrypted data exchange protocols for sensitive user information.
- Optimized database performance as the platform scaled, reducing API latency by **45%** through query optimization and caching mechanisms.
- Developed microservices for payment orchestration, automated ride assignments, and **audit logging** for compliance tracking.

Software Engineer — Access Solutions Ltd

June 2021 — Dec 2023

- Led full-stack development for large-scale **government digital platforms** across multiple Nigerian states, working directly with **regulated sector** requirements.
- Migrated legacy PHP systems to modern **Django-based REST APIs**, improving system reliability by **60%** and ensuring compliance with data protection standards.
- Built responsive frontend interfaces and administrative dashboards for data management, reporting, and compliance monitoring.
- Implemented **secure coding practices**, vulnerability assessments, and maintained audit logs across all deployed systems.

FEATURED PROJECTS

Classly — Blockchain Escrow

Cardano Hackathon project solving accountability in online classes. Built Web3 escrow smart contracts using **Aiken** — funds released only upon milestone completion, student ratings, and zero disputes. First hands-on Web3 experience.

Cardano | Aiken | Smart Contracts | Web3

Intelligent Flood Warning

AI pipeline predicting coastal flooding via XGBoost/LSTM models. Features a Next.js/FastAPI dashboard with interactive risk maps and real-time monitoring alerts.

Python | Scikit-learn | Next.js | FastAPI

Gonarlafiya Livestock AI

AI-driven disease prediction API for farmers. Built with FastAPI, providing multilingual disease advice (English/Hausa) based on symptom analysis. Deployed on GCP.

FastAPI | ML Model | GCP

CampLearn Backend

Scalable EdTech platform for high-concurrency exam results and interactive learning. Managed real-time data sync between Flutter clients and Django backend with Redis caching.

Django | PostgreSQL | Redis

EDUCATION

HND in Computer Science

Federal Polytechnic Bauchi

Graduated with Distinction

ND in Computer Science

Plateau State Polytechnic

Upper Credit
