Professional Summary

Web developer and SEO-focused technical specialist with 5+ years of experience building, modernizing, optimizing, and maintaining websites and web applications for businesses across logistics, mobility, tax/audit, oil and gas, education, humanitarian, and SaaS sectors. Strong background in frontend/backend development, responsive design, technical SEO, performance optimization, analytics-ready architecture, metadata strategy, and conversion-focused website implementation.

Experienced in rebuilding outdated websites into faster, cleaner, mobile-responsive platforms with improved information architecture, better page structure, optimized content, stronger technical foundations, and search-friendly implementation. Comfortable working across Next.js, React, TypeScript, Tailwind CSS, Django, Laravel/PHP, PostgreSQL, MySQL, Supabase, and deployment platforms such as Vercel and Render.

Core Skills

- Web development: Next.js, React, TypeScript, Tailwind CSS, HTML, CSS, JavaScript

- Backend/CMS-style systems: Django, PHP/Laravel, FastAPI, PostgreSQL, MySQL, Supabase
- Technical SEO: metadata, title tags, descriptions, semantic HTML, sitemap/robots readiness, crawlable page structure, canonical-friendly architecture
- On-page SEO: keyword-aware content structure, heading hierarchy, internal linking, service/location page optimization, image alt text
- Performance optimization: responsive layouts, image optimization, caching strategy, code splitting, database/query tuning, frontend performance cleanup
- Website modernization: redesigns, outdated UI replacement, mobile-first implementation, navigation restructuring, content cleanup, accessibility improvements
- Analytics and growth readiness: conversion paths, contact flows, lead capture, CTA placement, Vercel Analytics, SEO-friendly landing pages
- Integrations: Paystack, Google Maps, WhatsApp/contact flows, Supabase, custom APIs, third-party services

Selected Web & SEO Project Experience

Mabiz Global

Business Website Modernization | Django, PostgreSQL, Paystack, SEO Implementation

Live: <https://mabizglobal.com>

- Designed and implemented the frontend and backend architecture for Mabiz Global's business website.
- Improved the website's professional presentation, service visibility, content structure, and conversion paths for potential clients.
- Added SEO-focused improvements including clearer page hierarchy, service-focused content structure, metadata readiness, responsive pages, and improved discoverability for tax, audit, and business service users.

- Built a more maintainable technical foundation for future content, service updates, and business growth.

Oya Riyders Website and Mobility Platform

Mobility Website and Platform | Next.js, Tailwind CSS, Supabase, Paystack, Google Maps, SEO Implementation

Live: <https://oyariyders.com/>

- Led development of Oya Riyders' mobility platform and public-facing website.
- Built responsive web pages, clear user journeys, lead/action paths, payment-ready flows, and location-aware functionality using Google Maps.
- Added SEO improvements around page structure, mobile responsiveness, metadata, performance, and content discoverability for ride/mobility-related services.
- Supported a stronger web presence for users looking for reliable ride services and business partners evaluating the platform.

DVCEHF Humanitarian Portal

NGO Website | Next.js, Tailwind CSS, Framer Motion, Supabase

Live: <https://www.dvcehf.org/>

- Built a humanitarian organization website supporting donations, impact visibility, and community outreach.
- Created a clean, responsive structure that communicates mission, credibility, and impact to donors and partners.
- Improved user pathways for visitors looking to understand the organization, support its work, or contact the team.

Zambis Petroleum Operations Portal

Operations Website and Portal | Django, Next.js, PostgreSQL, Paystack

Live: <https://zambispetroleum.com>

- Built a digital operations platform and web presence for an oil and gas business.
- Supported logistics, equipment, inventory, rentals, and operational workflows through a modern web interface.
- Applied scalable backend and frontend practices to improve usability, reliability, and future maintainability.

ChatBot Pro

SaaS Landing and AI Product Website | Next.js, OpenAI, Tailwind CSS, WhatsApp API

Live: <https://chatbot-pro-phi.vercel.app/>

- Built a product website for an AI chatbot SaaS focused on lead capture, customer support automation, and appointment booking.
- Structured the site around clear value propositions, use cases, and conversion-focused messaging.
- Implemented a responsive, fast-loading frontend suitable for product discovery and lead generation.

Website Modernization Approach

- Audit the existing website for speed, mobile responsiveness, content structure, broken flows, weak CTAs, technical SEO gaps, and outdated UI patterns.
- Rebuild the information architecture around user intent, core services, search-friendly pages, and conversion paths.
- Improve technical SEO through semantic HTML, page titles, descriptions, headings, image alt text, cleaner routing, sitemap/robots readiness, and crawlable content.
- Improve performance through optimized assets, responsive images, cleaner frontend structure, caching where appropriate, and removal of unnecessary page weight.

- Validate the experience across desktop and mobile, then continue improving based on analytics, search visibility, and user behavior.

Professional Strengths

- Strong mix of design sense, technical implementation, SEO awareness, and backend understanding.
- Able to modernize websites beyond surface-level redesign by improving structure, speed, content clarity, and maintainability.
- Comfortable working with business owners and non-technical stakeholders to translate business goals into web pages, lead flows, and measurable improvements.
- Practical full-stack background, which helps resolve SEO and performance issues that involve frontend, backend, database, or deployment layers.

Availability

Available for remote Web & SEO Specialist roles, website modernization projects, technical SEO implementation, and full-stack website optimization.
