

AKANANG DAVID IGNATIUS

Python Software Engineer | Backend & Full-Stack Engineer | AI Systems | Scalable Architecture

Abuja, Nigeria | davidakanang@gmail.com | [Portfolio](#) | GitHub | [LinkedIn](#)

PROFESSIONAL SUMMARY

Python Software Engineer with over five years of professional experience designing, developing, debugging, and maintaining production-grade backend and full-stack applications. Specialized in Python, Django, FastAPI, React, Next.js, and TypeScript with extensive experience building scalable APIs, distributed systems, AI-integrated applications, and cloud-native platforms.

Proven ability to architect high-performance backend systems, implement new features, refactor legacy applications, resolve complex production issues, and optimize systems serving thousands of concurrent users. Experienced in writing automated test suites using pytest, conducting peer code reviews, collaborating through GitHub Pull Requests, and delivering reliable software across distributed engineering teams.

Passionate about software craftsmanship, clean architecture, scalable backend engineering, and AI-powered systems that solve real-world problems.

CORE TECHNICAL SKILLS

- Programming Languages:** Python, TypeScript, JavaScript (ES6+), PHP, SQL
- Backend Engineering:** Django, Django REST Framework, FastAPI, Laravel, REST APIs, GraphQL (Basic), WebSockets, Celery, Redis

- **Frontend Engineering:** React, Next.js, TypeScript, Tailwind CSS
 - **Databases:** PostgreSQL, MySQL, MongoDB, Redis, SQLite
 - **DevOps & Cloud:** Docker, Dokploy, Git, GitHub, GitHub Actions, Linux, Nginx, CI/CD
 - **Testing & Quality Assurance:** pytest, Unit Testing, Integration Testing, API Testing, Postman, Regression Testing, Test Automation
 - **Engineering Practices:** Production Debugging, Code Reviews, Pull Requests, Software Design, Refactoring, Performance Optimization, Platform Migration, Technical Documentation, Agile Development, Distributed Engineering
-

PROFESSIONAL EXPERIENCE

Full-Stack Developer

VendRush (Remote) | *Nov 2025 - Present*

- Designed and maintained scalable backend services powering a hyperlocal delivery platform built with Python, Next.js, TypeScript, PostgreSQL, and Supabase.
- Designed scalable backend APIs supporting customers, vendors, and administrators.
- Built JWT authentication and RBAC systems.
- Developed comprehensive unit and integration tests using pytest.
- Debugged production issues across large multi-module Python codebases.
- Refactored backend services to improve maintainability and scalability.
- Collaborated using GitHub Pull Requests and participated in peer code reviews.
- Managed Docker deployments and CI/CD workflows.
- Improved backend performance through API optimization and efficient database design.

Backend Engineer

LoadTally (Remote) | *Jan 2026 - Apr 2026*

- Built backend services for production applications.
- Implemented new API features.
- Debugged production issues.
- Refactored existing modules.
- Collaborated in distributed engineering teams.
- Reviewed code through GitHub Pull Requests.
- Optimized database performance.

Full-Stack Engineer

OyaRiyders | *Jan 2024 - Oct 2025*

- Developed scalable ride-hailing backend using Django.
- Built WebSocket-powered real-time systems.
- Designed secure payment workflows.
- Implemented automated pytest test suites.
- Refactored authentication and payment modules.
- Optimized PostgreSQL queries.
- Improved backend reliability.

Backend Engineer

Access Solutions Ltd | *June 2021 - Dec 2023*

- Led backend engineering for government-scale digital platforms.
 - Migrated legacy systems to Django.
 - Built scalable APIs.
 - Developed payment platforms.
 - Optimized high-concurrency applications.
 - Implemented Redis caching.
 - Delivered zero-downtime production releases.
-

FEATURED PROJECTS

CampLearn

Scalable Learning Management System | Python • Django • FastAPI • PostgreSQL

- Designed modular backend architecture.
- Built REST APIs.
- Implemented scalable course management.
- Developed production-ready backend services.

HausaMaster AI

AI-powered Hausa learning platform

- Built scalable APIs.
- AI-assisted language learning.
- WebSocket communication.
- Production deployment.

FoodRescue

Open Source Collaboration

- Worked with international developers.
- Conducted GitHub Pull Request reviews.
- Reviewed peer code.
- Implemented features.
- Fixed bugs.
- Improved software quality.

AI Recruitment Automation Pipeline

Python • Gemini AI

- Automated job discovery.
- AI-powered recruiter outreach.
- Resume personalization.
- End-to-end workflow automation.

Gonar Lafiya

Healthcare AI Platform | FastAPI

- Built AI-powered healthcare APIs.
 - Production-ready architecture.
 - REST APIs.
 - Cloud deployment.
-

ENGINEERING HIGHLIGHTS

- 5+ Years Professional Software Engineering
 - Python Backend Specialist
 - Distributed Remote Teams
 - AI Systems Development
 - Production Debugging
 - High-Concurrency Systems
 - Code Reviews
 - Pull Requests
 - pytest Testing
 - REST APIs
 - Docker
 - CI/CD
 - System Architecture
-

EDUCATION

Higher National Diploma (Distinction) *Computer Science* | Federal
Polytechnic Bauchi

National Diploma (Upper Credit) *Computer Science* | Plateau State
Polytechnic
