

Akanang David Ignatius

Full-Stack Engineer | Scalable Platforms & AI Systems

davidakanang@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-Stack Engineer with 5+ years of experience building scalable web platforms, AI-integrated systems, and production-grade backend infrastructure using Django, FastAPI, React, and Next.js. Experienced in architecting APIs, real-time systems, LMS platforms, and cloud-deployed applications serving high-concurrency environments.

Strong background in platform migrations, backend optimization, DevOps workflows, AI-assisted automation systems, and scalable infrastructure design. Proven ability to work independently within remote international teams while owning the full development lifecycle from architecture and implementation to deployment, maintenance, and performance optimization.

Experienced in building resilient production systems capable of handling high traffic loads, real-time communication workflows, and mission-critical digital services.

CORE TECHNOLOGIES

Backend Engineering

Python, Django, Django REST Framework, FastAPI, Laravel, PHP, REST APIs, WebSockets, Redis, Celery

Frontend Engineering

React.js, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, Responsive UI Development

Databases & Infrastructure

PostgreSQL, MySQL, MongoDB, Redis, Docker, Dokploy, CI/CD, Linux, Nginx, Cloud Deployment

AI & Integrations

OpenAI/Gemini Integrations, AI Automation Pipelines, WhatsApp APIs, Payment Integrations, Authentication Systems

Engineering Practices

System Architecture, Platform Migration, Scalable Systems, API Design, Performance Optimization, Production Reliability, Remote Collaboration

PROFESSIONAL EXPERIENCE

Full-Stack Developer

VendRush - Remote

Nov 2025 - Present

- Architected and maintained a scalable hyperlocal delivery platform using Next.js, TypeScript, Supabase, and backend services supporting real-time operational workflows.
- Developed secure RESTful APIs with JWT authentication and role-based access control for customers, vendors, and administrators.
- Built responsive administrative dashboards for order management, analytics, compliance monitoring, and vendor operations.
- Implemented scalable backend logic and optimized API workflows for performance, maintainability, and reliability under growing platform usage.
- Managed cloud deployment workflows, Docker-based infrastructure, and production environment maintenance.

Backend Engineer (Remote Internship)

LoadTally - Raleigh, North Carolina, United States

Jan 2026 - Apr 2026

- Collaborated remotely with a US-based engineering team to develop and maintain backend services and API workflows in a distributed work environment.
- Contributed to scalable backend architecture, debugging, feature implementation, and system reliability improvements.
- Worked with RESTful APIs, authentication systems, database operations, and production engineering workflows.
- Participated in agile-style development processes, version control collaboration, and remote engineering communication workflows.
- Assisted in improving backend maintainability, integration reliability, and operational performance across platform services.

Full-Stack Engineer

OyaRiyders

Jan 2024 - Oct 2025

- Engineered scalable backend infrastructure for a ride-hailing platform using Django, PostgreSQL, Redis, and real-time communication systems.
- Built RESTful APIs and WebSocket-powered real-time workflows supporting ride updates, notifications, and live location tracking.
- Developed React/Next.js administrative dashboards for operational monitoring, rider management, analytics, and payment tracking.
- Integrated secure payment systems with webhook validation, transaction automation, and fault-tolerant processing flows.

- Optimized backend performance and database queries, significantly improving API response times and platform reliability under production traffic.
- Managed deployment infrastructure using Docker, Dokploy, and self-hosted services, including Chatwoot integrations.
- Implemented authentication, authorization, and role-based access control systems for secure platform operations.

Backend Engineer (Python / Laravel)

Access Solutions Ltd

June 2021 - Dec 2023

- Led backend development for government-scale digital platforms and enterprise systems across multiple Nigerian states.
- Migrated legacy systems into scalable Django-based architectures, improving reliability, maintainability, and operational efficiency.
- Designed and maintained APIs supporting transportation systems, payment platforms, self-service portals, and communication services.
- Built secure backend services with authentication, audit logging, and role-based administrative access.
- Developed high-concurrency systems with optimized database structures and scalable backend workflows.
- Collaborated with cross-functional teams to deliver production-ready digital platforms serving large user populations.

Key Engineering Achievement - Bauchi State Examination Result Platform

- Led the digital transformation of a statewide examination result system for the Ministry of Education in Bauchi State, migrating a previously manual process into a scalable digital platform serving thousands of students.
- Engineered high-concurrency backend optimizations for peak traffic scenarios during examination result releases, where over 50,000 users accessed the platform simultaneously.
- Implemented Redis-based in-memory caching strategies for high-frequency student result lookups, significantly reducing database load and improving response performance from seconds to milliseconds.
- Maintained platform stability with zero downtime during critical production traffic spikes while improving scalability, resilience, and overall system reliability.

FEATURED PROJECTS

CampLearn - LMS & E-Learning Platform

Django, FastAPI, PostgreSQL, Redis

- Built scalable backend infrastructure powering course management, content delivery, user enrollment, and learning workflows.
- Designed RESTful APIs supporting educational content systems and frontend integrations.
- Implemented real-time learning features and optimized backend performance for concurrent student access.
- Maintained cloud deployment environments and production API documentation.

Learn Hausa Platform

Django, WebSockets, PostgreSQL

- Designed scalable APIs and backend services for an AI-assisted language learning platform.
- Implemented real-time communication features supporting interactive learning experiences.
- Structured backend architecture for long-term scalability and maintainability.

AI Recruitment Automation Pipeline

Python, Gemini AI, Automation Systems

- Developed a fully automated 7-phase AI pipeline that scans remote job opportunities, identifies recruiter contacts, and generates personalized AI-driven outreach messages.
- Integrated AI-assisted workflows using Google Gemini for automated personalization and communication generation.
- Designed scalable automation logic for job discovery, recruiter targeting, and intelligent outreach processing.

Gonar Lafiya - AI Health Platform

FastAPI, AI Systems, Cloud Deployment

- Built AI-assisted backend APIs supporting multilingual healthcare and symptom-analysis workflows.
- Developed structured RESTful endpoints with production-grade API documentation and scalable deployment architecture.
- Integrated AI-driven response workflows supporting healthcare accessibility and operational scalability.

EDUCATION

Higher National Diploma (HND) - Computer Science

Federal Polytechnic Bauchi - Distinction

National Diploma (ND) - Computer Science

Plateau State Polytechnic - Upper Credit

ADDITIONAL INFORMATION

- Experienced in working within remote and distributed engineering environments.
- Comfortable owning the full development lifecycle from architecture to deployment and maintenance.
- Strong understanding of scalable backend systems, production infrastructure, caching strategies, and platform optimization.
- Experienced with high-concurrency applications, real-time systems, and scalable API architectures.
- Available for full-time remote collaboration across international teams.
