

AKANANG DAVID IGNATIUS

**Python Docker Engineer | AI Infrastructure | Backend Systems
Integration**

Abuja, Nigeria | davidakanang@gmail.com | [Portfolio](#) | GitHub | [LinkedIn](#)

PROFESSIONAL SUMMARY

Python Software Engineer with over 5 years of experience specializing in backend infrastructure, REST APIs, and microservices using FastAPI, Flask, and Django. Highly proficient in Git, Docker, and CI/CD software pipeline setup for scalable applications. Extensive experience building robust backend connectors for SaaS integrations (Slack, Gmail, Jira, Notion) and developing complex data processing pipelines.

Power user of AI coding assistants (Cursor, Claude Code, GitHub Copilot) for rapid development, testing, and systematic QA. Strong background in data/task mining, defining evaluation rubrics, and validating AI behavior to ensure high-quality, realistic software pipelines in distributed engineering teams.

CORE TECHNICAL SKILLS

- **Programming Languages:** Python, TypeScript, SQL, Bash
- **Backend Architecture:** FastAPI, Flask, Django, REST APIs, Microservices, WebSockets
- **Infrastructure & Tools:** Git, Docker, CI/CD Pipelines, GitHub Actions, Linux, Nginx
- **AI & Automation:** Cursor, Claude Code, GitHub Copilot, Codex, Workflow Data Mining

- **Testing & QA:** pytest, Unit/Integration Testing, Evaluation Rubrics, Quality Assurance
 - **Integrations:** SaaS Connectors (Slack, Notion, Jira, Linear, Gmail APIs), OAuth
-

PROFESSIONAL EXPERIENCE

Python Docker Engineer / Backend Developer

VendRush (Remote) | *Nov 2025 - Present*

- Built and orchestrated scalable Python (FastAPI/Django) microservices using Docker, streamlining deployment pipelines across distributed environments.
- Developed backend connectors and integrated third-party SaaS APIs, ensuring faithful replication of workflows, system emulation, and robust data synchronization.
- Utilized AI coding assistants (Cursor, Claude) daily to accelerate API development, author comprehensive pytest suites, and perform rapid, high-quality code reviews.
- Designed evaluation rubrics and performed structured QA testing to validate data realism, integration behavior, and overall system correctness.
- Mined and authored realistic long-horizon workflows based on data analysis of user task patterns.

Backend Integration Engineer

LoadTally (Remote) | *Jan 2026 - Apr 2026*

- Implemented robust Python REST APIs and scalable backend integrations in a microservice architecture.
- Managed Dockerized environments and configured CI/CD pipelines using GitHub Actions to automate backend testing and deployments.

- Collaborated in distributed engineering teams, leveraging AI tools to maintain high development velocity and rigorous code quality standards.
- Performed extensive backend testing, integration validation, and structured QA for external system connectors.

Backend Engineer

OyaRiyders | *Jan 2024 - Oct 2025*

- Engineered complex backend applications and real-time systems using Python, Django, and Docker containers.
- Developed comprehensive testing rubrics and automated test suites (pytest) to verify system behavior, integration correctness, and edge cases.
- Automated workflows and created robust CI/CD software pipelines, optimizing the deployment of containerized backend services.
- Managed database performance and backend reliability for a scalable, high-concurrency platform.

Software Engineer

Access Solutions Ltd | *June 2021 - Dec 2023*

- Led the backend engineering and Dockerization of high-concurrency government platforms using Python.
- Built scalable REST APIs and managed complex software pipeline setups, migrating legacy systems to modern, containerized Django architectures.
- Conducted exhaustive QA, code reviews, and testing to ensure system accuracy and zero-downtime production releases.
- Actively collaborated across teams to deliver assigned work on agreed milestones and expected quality bars.

FEATURED PROJECTS

AI Recruitment Automation Pipeline

Python • FastAPI • Gemini AI • SaaS APIs

- Developed an end-to-end Python backend mimicking SaaS workflows (Gmail, Slack integrations) to automate recruitment tasks.
- Mined workflow data to author realistic automation tasks and long-horizon actions for AI agents.
- Ensured strong test coverage and structured QA evaluation for AI integration points.

CampLearn

Scalable Dockerized Platform | Python • FastAPI • PostgreSQL • Docker

- Architected a modular backend focusing on clean microservices architecture and automated CI/CD pipelines.
- Built robust REST APIs with strict code review processes and testing standards throughout development.

HausaMaster AI

AI-Powered Learning Platform

- Built AI-powered APIs, utilizing AI coding tools (GitHub Copilot, Cursor) for rapid prototyping and rigorous backend testing.
- Conducted thorough integration validation to ensure reliable communication with third-party services.

EDUCATION

Higher National Diploma (Distinction) *Computer Science* | Federal Polytechnic Bauchi

National Diploma (Upper Credit) *Computer Science* | Plateau State Polytechnic
